CONTENTS

EDITOR'S FOREWORD. *V. Adrian Parsegian*

Poster Summaries

ION CHANNELS

1 THE CYSTIC FIBROSIS TRANSMEMBRANE CONDUCTANCE REGULATOR CHLORIDE CHANNEL. IODIDE BLOCK AND PERMEATION. *Joseph A. Tabcharani, Xiu-Bao Chang, John R. Riordan, and John W. Hanrahan*

5 A POINT MUTATION IN A *SHAKER* K^+ CHANNEL CHANGES ITS CHARYBDOTOXIN BINDING SITE FROM LOW TO HIGH AFFINITY. *Steve A. N. Goldstein and Christopher Miller*

8 MAPPING HYDROPHOBIC RESIDUES OF THE INTERACTION SURFACE OF CHARYBDOTOXIN. *Per Stampe, Ludmilla Kolmakova-Partensky, and Christopher Miller*

10 SIZING OF AN ION PORE BY ACCESS RESISTANCE MEASUREMENTS. *Igor Vodyanoy and Sergey M. Bezrukov*

12 STRUCTURE AND INTERACTIONS OF MAGAININ ANTIBIOTIC PEPTIDES IN LIPID BILAYERS. A SOLID-STATE NUCLEAR MAGNETIC RESONANCE INVESTIGATION. *Burkhard Bechinger, Michael Zasloff, and Stanley J. Opella*

15 CALCIUM CHANNEL AND MEMBRANE FUSION ACTIVITY OF SYNEXIN AND OTHER MEMBERS OF THE ANNEXIN GENE FAMILY. *Harvey B. Pollard, H. Robert Guy, Nelson Arispe, Milton de la Fuente, George Lee, Eduardo M. Rojas, John R. Pollard, Meera Srivastava, Zhen-Yong Zhang-Keck, Natasha Merezhinskaya, Hung Caohuy, A. Lee Burns, and Eduardo Rojas*

19 IS A β-BARREL MODEL OF THE K^+ CHANNEL ENERGETICALLY FEASIBLE? *Stephen Bogusz and David Busath*

22 DOES THE NA CHANNEL CONDUCT IONS THROUGH A WATER-FILLED PORE OR A CONDENSED-STATE PATHWAY? *H. Richard Leuchtag*

25 AMINO ACID SUBSTITUTIONS AND ION CHANNEL FUNCTION. MODEL-DEPENDENT CONCLUSIONS. *M. D. Becker, R. E. Koeppe II, and O. S. Andersen*

28 A DIPOLAR AMINO ACID SUBSTITUTION INDUCES VOLTAGE DEPENDENT TRANSITIONS BETWEEN TWO STABLE CONDUCTANCE STATES IN GRAMICIDIN CHANNELS. *S. Oiki, R. E. Koeppe II, and O. S. Andersen*

31 PHOSPHORYLATION OF A CONSERVED PROTEIN KINASE C SITE IS REQUIRED FOR MODULATION OF NA^+ CURRENTS IN TRANSFECTED CHINESE HAMSTER OVARY CELLS. *James W. West, Randall Numann, Brian J. Murphy, Todd Scheuer, and William A. Catterall*

34 GATING CURRENTS FROM A DELAYED RECTIFIER K^+ CHANNEL WITH ALTERED PORE STRUCTURE AND FUNCTION. *M. Taglialatela, G. E. Kirsch, A. M. J. VanDongen, J. A. Drewe, H. A. Hartmann, R. H. Joho, E. Stefani, and A. M. Brown*

37 EXPRESSED NA CHANNEL CLONES DIFFER IN THEIR SENSITIVITY TO EXTERNAL CALCIUM CONCENTRATION. *M. Chahine, L.-Q. Chen, R. G. Kallen, R. L. Barchi, and R. Horn*

41 LOCATING A RESIDUE IN THE DIPHTHERIA TOXIN CHANNEL. *Joseph A. Mindell, Jared A. Silverman, R. John Collier, and Alan Finkelstein*

GAP JUNCTIONS

45 INTERCELLULAR COMMUNICATION THROUGH GAP JUNCTIONS IS REDUCED IN SENESCENT CELLS. *Han-qing Xie, Ruo Huang, and Valerie W. Hu*

48 GATING OF GAP JUNCTION CHANNELS AS REVEALED IN CELLS STABLY TRANSFECTED WITH WILD TYPE AND MUTANT CONNEXIN cDNAs. *D. C. Spray, A. P. Moreno, B. Eghbali, M. Chanson, and G. I. Fishman*

51 PHOSPHORYLATION SHIFTS UNITARY CONDUCTANCE AND MODIFIES VOLTAGE DEPENDENT KINETICS OF HUMAN CONNEXIN43 GAP JUNCTION CHANNELS. *A. P. Moreno, G. I. Fishman, and D. C. Spray*

RHODOPSIN

54 Membrane Assembly of Bacterio-opsin Mutants Expressed in *Halobacteria* and Incorporation of the Proteins into Phospholipid Bilayers. *Martin Teintze and Zhi-jun Xu*

56 Fourier Transform Infrared Spectroscopic Analysis of Altered Reaction Pathways in Site-directed Mutants: The D212N Mutant of Bacteriorhodopsin Expressed in *Halobacterium Halobium*. *Mark S. Braiman, Alexandra L. Klinger, and Robert Doebler*

RECEPTORS

59 The Extracellular Domain of Substance P (NK1) Receptor Comprises Part of the Ligand Binding Site. *Tung Ming Fong, Hong Yu, and Catherine D. Strader*

61 Site-specific Mutations of Nicotinic Acetylcholine Receptor at the Liquid-protein Interface Dramatically Alter Ion Channel Gating. *Lian Li, Yung-Hui Lee, Pamela Pappone, Andrew Palma, and Mark G. McNamee*

64 Probing Conformational Changes in the Nicotinic Acetylcholine Receptor by Fourier Transform Infrared Difference Spectroscopy. *John E. Baenziger, Keith W. Miller, Michael P. McCarthy, and Kenneth J. Rothschild*

67 Bacterial Chemoreceptor Signaling Probed by Flash Photorelease of a Caged Serine. *Shahid Khan, Kwame Amoyaw, John L. Spudich, Jordon P. Reid, and David R. Trentham*

69 *Escherichia Coli* Aspartate Receptor. Oligomerization of the Cytoplasmic Fragment. *David G. Long and Robert M. Weis*

72 Kinetic Behavior of Cloned Mouse Acetylcholine Receptors: A Semi-autonomous, Stepwise Model of Gating. *Anthony Auerbach*

74 Steric Factors Limit Access to the Noncompetitive Inhibitor Site of the Nicotinic Acetylcholine Receptor Fluorescence Studies. *Jeffrey M. Herz and Stephen J. Atherton*

ATPASES

77 Site-specific Amino Acid Alterations in the Ca^{+2} Binding Domains in Calmodulin Impair Activation of RBC Ca^{2+}-ATPase. *Danuta Kosk-Kosicka, Tomasz Bzdega, Alicja Wawrzynow, D. Martin Watterson, and Thomas J. Lukas*

MEMBRANE PROTEIN

79 Biophysical Studies of Cytochromes b5 with Amino Acid Substitutions in the Membrane-binding Domain. *Alexey Ladokhin, V. G. Tretyachenko-Ladokhina, Peter W. Holloway, L. Wang, and A. W. Steggles*

82 ^{19}F Nuclear Magnetic Resonance Studies of Aqueous and Transmembrane Receptors: Examples from the *Escherichia Coli* Chemosensory Pathway. *Joseph A. Falk, Linda A. Luck, and Jon Scherrer*

87 Multisite Association by Recombinant Proteins Can Enhance Binding Selectivity: Preferential Removal of Immune Complexes from Serum by Immobilized Truncated FB Analogues of the B Domain from Staphylococcal Protein A. *James S. Huston, Charles Cohen, Denny Maratea, Fran Fields, Mei-Sheng-Tai, Nancy Cabral-Dennison, Robert Juffras, David Rueger, Richard J. Ridge, Hermann Oppermann, Peter Keck, and Lynne G. Baird*

92 The Lateral Mobility of Some Membrane Proteins is Determined by Their Ectodomains. *Fen Zhang, Bruce Crise, Bing Su, Yu Hou, John K. Rose, Alfred Bothwell, and Ken Jacobson*

95 Analyzing the Fusion Process of Influenza Hemagglutinin by Mutagenesis and Molecular Modeling. *H. R. Guy, Stewart R. Durell, Christian Schloch, and R. Blumenthal*

98 Exploration of the Functional Significance of the Stilbene Disulfonate Binding Site in Mouse Band 3 by Site-directed Mutagenesis. *Hermann Passow, Phillip G. Wood, Sigrid Lepke, Hanne Müller, and Mika Sovak*

101 Simulation of the Role of Water in Ion Channel Gating. *Michael E. Green*

104 Protein Structure Predication Based on Statistical Potential. *Shaojian Sun, Ning Luo, Rick L. Ornstein, and Robert Rein*

107 Analysis and Refinement of Criteria for Predicting the Structure and Relative Orientations of Transmembranal Helical Domains. *Juan A. Ballesteros and Harel Weinstein*

110 The Role of Pro/Hyp-kinks in Determining the Transmembrane Helix Length and Gating Mechanism of [Leu]zervamicin Channel. *Juan A. Ballesteros and Harel Weinstein*

112 Structure and Function of Interleuk-1 Based on Crystallographic and Modeling Studies. *B. Veerapandian*

ENZYMES

116 Application of Site-Directed Mutagenesis in Nuclear Magnetic Resonance Spectroscopy. *Christopher J. Penington and Gordon S. Rule*

119 Structural and Functional Studies of the Metalloendopeptidase (EC 2.4.24.15) Involved in Degrading Gonadotropin Releasing Hormone. *M. J. Glucksman, M. Orlowski, and J. L. Roberts*

Plenary Discussion Papers

ION CHANNELS

123 Large Scale Rearrangement of Protein Domains is Associated with Voltage Gating of the VDAC Channel. *Songzhi Peng, Elizabeth Blachly-Dyson, Michael Forte, and Marco Colombini*

136 A Single Nonpolar Residue in the Deep Pore of Related K^+ Channels Acts as a K^+:Rb^+ Conductance Switch. *G. E. Kirsch, J. A. Drewe, M. Taglialatela, R. H. Joho, H. A. Hartmann, M. DeBiasi, and A. M. Brown*

145 Formation of Non-B6.3-Helical Gramicidin Channels Between Sequence-substituted Gramicidin Analogues. *J. T. Durkin, L. L. Providence, R. E. Koeppe II, and O. S. Andersen*

160 Gating Currents in *Shaker* K^+ Channels. Implications for Activation and Inactivation Models. *E. Perozo, D. Papazian, E. Stefani, and F. Bezanilla*

GAP JUNCTIONS

172 Mutational Analysis of Gap Junction Formation. *Gerhard Dahl, Rudolf Werner, Eric Levine, and Cristina Rabadan-Diehl*

183 Molecular Analysis of Voltage Dependence of Heterotypic Gap Junctions formed by Connexins 26 and 32. *Joshua B. Rubin, Vytas K. Verselis, Michael V. L. Bennett, and Thaddeus A. Bargiello*

RECEPTORS

196 Threonine in the Selectivity Filter of the Acetylcholine Receptor Channel. *A. Villarroel and B. Sakmann*

209 Structure and Dynamics of *Escherichia Coli* Chemosensory Receptors. Engineered Sulfhydryl Studies. *Claire L. Careaga and Joseph J. Falke*

ATPASES

220 Molecular Dissection of Functional Domains of the E1E2-ATPase Using Sodium and Calcium Pump Chimeric Molecules. *D. B. Luckie, V. Lemas, K. L. Boyd, D. M. Fambrough, G. Inesi, and K. Takeyasu*

228 Mutagenesis of the Yeast Plasma Membrane H^+-ATPase. A Novel Expression System. *Rajini Rao and Carolyn W. Slayman*

MODELING

238 Atomic Scale Structure and Functional Models of Voltage-gated Potassium Channels. *Stewart R. Durrell and H. Robert Guy*
